

Team Number: Team 14

Meeting Date: 4/30/2026

Milestone 3 Meeting Summary and Development Plan

1. Summary of UI Feedback

- Homepage/General
 - Remove minus symbols and any other unclear UI elements.
 - Improve overall color consistency.
- Search/Browsing
 - Category and course filters shouldn't look like text boxes and have visible arrows to indicate dropdowns.
 - Avoid text-field appearance for any other dropdowns.
 - Add sorting options.
 - Include item condition.
- Navigation/UX
 - "Back to listings" should be left-aligned.
 - Login behavior should return the user to the previous page instead of dashboard. This is to reduce excessive back and forth navigation.
- Item details
 - Add inline messaging (text box and send message button) so users don't leave the page.
 - Messaging per item is correct and should be kept.
 - Refresh may be needed to view new messages but is a minor issue.
- Trade system
 - Feature not fully implemented.
 - Need UI to view all trade offers, display items being traded, and navigate to those trade conversations. Trade and buyer messaging must be distinguished.
- Post Listings
 - Labels should be left-aligned.
 - Required fields (*) should be red.
 - The listing type should be a dropdown.

- Ensure the image upload limit of 5 images.
 - Add ability to remove images.
 - New listings should be approved before posting and show confirmation.
- Optional enhancements
 - Logo.

2. Summary of Code and Architecture Feedback

- Routes/index.js mixes static page routing and API logic in one file.
- Middleware/errorHandler.js exists but is not used; error handling is implemented.
- File upload config lacks file-type validation.

3. Summary of Github Usage Feedback

- Branch usage is good, branch names could be better and contain some level of scope/intent like fix: feature: named branches.
- Commit messages are okay but try to avoid, messages like Add files via upload, Merge pull request #35, add-M2 document.
- Commit counts are ok but work needs to be more evenly spread around.

4. Summary of DB Feedback

- Database access works.

5. Teamwork and Risk Management

- Majority of core functionality implemented.
- Remaining work includes UI improvements, trade system completion, and other minor feature fixes.

6. Architecture review confirmation

- The team is in a good position overall.

7. P1 Features for final delivery

- Users shall be able to browse listings.
- Users shall be able to search listings by keywords.
- Users shall be able to filter listings by category.
- Users shall be able to view listing details.
- Users shall be able to register using an SFSU email.
- Users shall be able to create listings.

- Users shall be able to send messages to sellers.
- Users shall be able to select campus meetup locations.
- Users shall be able to manage listings.
- Users shall be able to create trade requests.
- Users shall be able to filter listings by course.
- Users shall be able to view their dashboard/account.
